

# KEEP AMERICA IN SPACE

[www.KeepAmericainSpace.com](http://www.KeepAmericainSpace.com)

America's space program is being scrutinized. A program that has resulted in scientific advancements that save lives daily. One that generates tens-of-thousands of high-tech jobs. One that infuses billions of dollars into our nation's economy. And a program that inspires our children to be great thinkers and doers.

We all know a breast cancer survivor, or someone alive today thanks to a programmable pacemaker, smoke detector, kidney dialysis or the jaws of life. The human exploration of space has brought these, and many more technologies home to earth, improving and protecting our lives.

As a global leader, can we afford not to continue supporting America's best and brightest to explore and discover? For every day we waiver, another breakthrough goes undiscovered, another child's future uncharted, another country's program becomes stronger than our own.

It's time to renew our commitment to NASA and America's space program. Our decisions today will affect generations to come.
